

COMPLIANCE PLUS

Compliance Plus is an easy to use training management program with robust assessment, results tracking and reporting features. This module uses the Internet and hosted databases to provide a cost effective application for assessing knowledge retention and the competency of your stakeholders on processes, products, compliance and other issues.

Building the courses

- You add and maintain your own learning content and enter your own tests and quizzes, tailoring your competency measurements to your organisation
- Learning material can be linked to an assessment and can be forced to be viewed prior to taking the test. The material can be in various file types such as Word, PowerPoint, video etc.
- Administrator permissions allow you to control access to functions and information at all levels across your Group structure. These permissions provide access to allocating courses to employee/participants through to viewing results

Designing assessments

- Assessments can be designed to test knowledge using a selection of seven question types including randomising for presentation to the participant
- Assessments can be built into sections (Topics) with different pass marks for each to give varying weights according to the importance of the questions e.g. compliance questions maybe 100% and general knowledge 75%
- Media can be imbedded into a question to show to the participant as the basis for the question

Results tracking to measure competencies and prove duty of care

- Immediately an assessment is taken, anytime, anywhere, the results are stored in the hosted database – who has passed, failed or not attempted courses
- Comprehensive reporting through access codes is available anytime, anywhere
- Access to the participants full test results, which are forever retained in history, provide a powerful compliance tool
- Additional in-depth analysis and presentation can be performed by exporting data

Easy to use at administration and employee level

- You can get started right away, enjoying rapid time-to-value, by avoiding in-house programming requirements
- The hosted program reduces the burden on in-house IT facilities
- Hosting by a secure data-centre with guaranteed uptime reduces the burden of communications costs and gives access 24/7
- Avoid the cost of dedicated software programs for each computer

Working with the HTS suite

- Integrates with the Resource Library for the testing of employees' knowledge and tracking of results across the organisation
- Integrates with the Survey Plus module for Course evaluation, measure satisfaction levels etc.
- Manages and tracks learning requirements to address performance gaps discovered by measuring performance using People Plus
